Annual Report on Fiscal Year 2006 Licensed Acute Care Hospital Bed Capacity Effective July 1, 2005

Background

In October of 2000, Maryland's Department of Health and Mental Hygiene implemented an annual licensure process for acute care hospitals based on inpatient census. This process standardized the measurement of licensed acute care hospital beds throughout the state. The Department of Health and Mental Hygiene calculates the average daily census of each hospital for a 12 month reporting period, and licensed bed capacity is established for the next fiscal year at 140% of the hospital's average daily census. This licensure approach assumes that all hospitals can comfortably operate at an average annual occupancy rate of approximately 71.4%. The process thus establishes a maximum licensed capacity for each acute care hospital at 140% of its actual utilization.

The initial implementation of this licensure process resulted in a statewide reduction in licensed acute care hospital bed capacity of 2,773 beds, or a 23% reduction, reflecting the large number of 'paper beds' in existence at that time. In each of the next two years, however, the total number of licensed beds increased by approximately 2%, reflecting actual growth in acute care hospitals' inpatient utilization. This growth leveled off over the next three years. This year, hospitals' licensed capacity will remain virtually the same as last year.

This *Annual Report on FY 2006 Licensed Acute Care Hospital Bed Capacity* has been prepared by the Maryland Health Care Commission's Health Resources Division. Licensed acute general hospital beds (medical/surgical/gynecology/addictions, obstetric, pediatric and acute psychiatric services) are included in this inventory report. Newborn bassinets and non-acute care beds located in acute care hospitals, such as "special hospital" beds (rehabilitation, chronic care, long term psychiatric services) are excluded from the annual licensure process and are therefore not included in this report. The Commission maintains a detailed inventory of all licensed beds and bassinets in Maryland's acute general hospitals, which is available upon request.

Licensed Acute Care Hospital Beds in Maryland: FY 2006

Table 1 shows the licensed acute care bed capacity for each acute care hospital, by service, effective July 1, 2005. The calculation of licensed beds for FY 2006, based on each hospital's average daily census from April 1, 2004 through March 31, 2005, results in a total acute care general hospital bed capacity of 10,323 beds in Maryland. This compares to 10,321 licensed beds for FY 2005, for an overall statewide increase from FY 2005 to FY 2006 of two beds. Table 2 shows the six year trend in licensed acute care beds by hospital, beginning with the year just prior to implementation of the new licensure process.

* Number of licensed beds in effect prior to the October 2000 implementation of Maryland's annual licensure calculation process. ** Formerly North Arundel Hospital.

The following lists summarize the details of which hospitals experienced the largest increases and decreases in the number of licensed beds.

- Twenty-three of Maryland's 47 acute general hospitals received an increased number of licensable beds. The biggest individual increases are seen at:
 - Good Samaritan Hospital - 27 beds
 - Peninsula Regional Medical Center - 27
 - University of Maryland Medical Center - 15
 - Holy Cross Hospital - 13
 - Johns Hopkins Hospital - 11
- Twenty-three hospitals saw the total number of beds they can license decrease. The biggest reductions are at:
 - Washington Adventist Hospital - (26)
 - Maryland General Hospital - (18)
 - Prince George's Hospital Center - (14)
 - Greater Baltimore Medical Center - (13)
 - Doctors Community Hospital - (13)

Figure 1 shows both the change in the number of licensed beds over the last three years and the change as a percentage, illustrating the relative size of the increases since implementation.

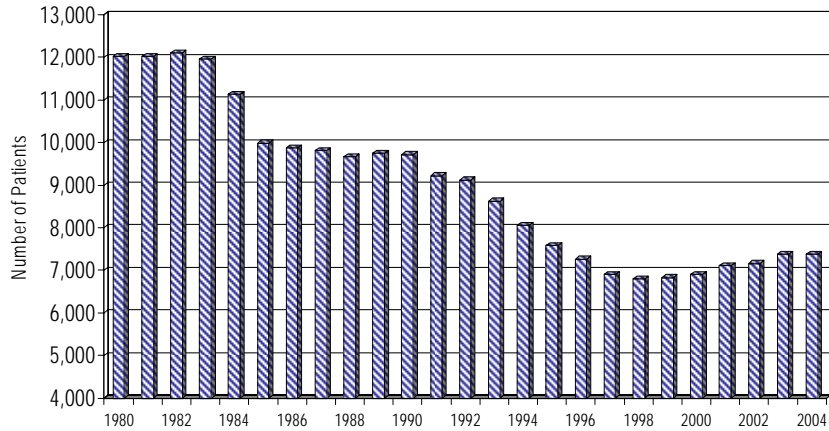

**Figure 1. Change in Licensed Beds:
Maryland Acute Care Hospitals, FY 2001 – FY 2006**

Figure 2 shows the recent trend of increasing utilization in the context of the long term decline in hospital utilization, as measured by average daily census.

**Figure 2. Trend in Average Daily Census:
Maryland Acute General Hospitals, CY 1980 – 2004**

Source: Maryland Hospital Discharge Abstract

Table 3 shows the changes in licensed beds from a regional perspective. Three of the five regions saw decreases in licensed beds. The number of licensed beds in the Eastern Shore and Central Maryland regions increased.

**Table 3. Change in Number of Licensed Beds by Region:
Maryland, FY 2005 - 2006**

Region	Change in Number of Licensed Beds from FY2005	Percent Change
Western Maryland	(3)	(0.4%)
Montgomery County	(40)	(3.0%)
Southern Maryland	(35)	(2.9%)
Central Maryland	70	1.1%
Eastern Shore	10	1.3%

Source: Maryland Health Care Commission

Table 4 shows the trend in the number of licensed beds by acute care service. Most of the increase in licensed beds over the last five years has occurred in medical/surgical service. This table shows that the numbers of obstetric beds and acute psychiatric beds have been steadily declining, while the number of MSGA beds has been increasing.

**Table 4. Trend in Licensed Acute Care Beds by Service,
Maryland Acute Care Hospitals, FY 2001 - FY 2006**

Service Category	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	FY 2006
Medical/Surgical	7,597	7,740	7,922	8,065	8,318	8,349
Obstetrics	898	873	880	854	851	840
Pediatrics	488	480	480	454	460	457
Acute Psychiatric	692	698	712	693	692	677
TOTAL	9,562	9,791	9,994	10,066	10,321	10,323

Source: Maryland Health Care Commission

Table 5 shows the FY 2006 inventory of critical care beds, which are a subset of medical-surgical beds. Critical care beds comprise just over 13% of the state's licensed MSGA beds, ranging from 6% at Upper Chesapeake Medical Center and Good Samaritan Hospital, to 29% at Suburban Hospital.

Table 6 shows the trend in licensed acute care beds among hospitals that are part of a multi-hospital system and hospitals that are independent. The Maryland hospitals in the nine multi-hospital systems include 49% of the hospitals and 58% of the licensed acute care beds. For the third year in a row, more growth occurred in the non-system hospitals than in the system hospitals. And, since FY 2001, the number of licensed acute care beds in non-system hospitals has grown by 8.1%, compared with a 7.9% increase in the system hospitals.

Maryland Total		12,328	9,562	9,791	9,994	10,066	10,321	10,323

Notes: 1. 'Systems' are local multi-hospital systems with more than one hospital in Maryland. This table includes only those hospital members in Maryland. 2. Number of licensed beds in effect prior to the October 2000 implementation of Maryland's annual licensure calculation process. 3. Formerly North Arundel Hospital.

Total Available Acute Care Bed Capacity

The licensure process was initially intended to reduce the number of ‘paper beds’¹ on hospitals’ licenses. Paper beds were contributing to the perception of significant excess capacity in the 1990s because they inflate hospitals’ actual inpatient capacity. With the elimination of 2,766 licensed beds in November of 2000, the number of licensed beds in Maryland was closer to actual capacity. However, without a consistent measure of actual physical capacity for acute care, the changes that have occurred over time that affect this inventory, including renovation of excess patient care space to alternative uses, and use of double occupancy rooms as private rooms, are unknown.

The Commission surveys hospitals for the total number of acute care beds they could physically accommodate if necessary. The results of this survey are shown on Table 7.² Available acute care capacity is defined as the total number of acute inpatient beds that are available for use, or that could be physically set up in space appropriate for licensed acute inpatient care as admission might warrant. It is a physical count of beds based on the available headwalls, measuring the maximum operating capacity under normal, non-emergency circumstances, rather than a measure of staffing capacity.

Two problems with an accurate reflection of the state’s acute care capacity remain. First, acute care bed capacity still exists that is neither licensed nor used. This additional available acute care capacity, which could be available to accommodate short term growth in demand and, if necessary, major emergencies and disasters, has been estimated through the Commission’s survey at 1,237 beds. Second, some hospitals are operating with fewer beds than they have licensed. Twelve hospitals are licensed for a total of 270 more beds than their physical plant can currently accommodate. These hospitals are either in growing communities, or have undergone extensive renovations of excess acute care space to alternative uses during the past decade.

Emergency Department Treatment Capacity

Table 8 summarizes the Commission’s third supplemental survey of emergency department treatment capacity.

¹ The term “paper beds” typically refers to those beds that are licensed but not used because of lack of demand or because they no longer exist due to previous conversion to alternative uses.

² This is the third year of the voluntary survey. The data are self reported and not verified by the Commission, and are therefore subject to error. To the extent possible, the Commission is verifying hospitals’ total available capacity on a case by case basis, primarily through the certificate of need review program.

Source: MHCC Supplemental Survey: Emergency Department Treatment Capacity; June 1, 2005. Data are self reported. Capacity for decontamination is excluded unless the survey indicates that this is provided in a room or area also used for treatment.

* Includes space for triage, observation, holding etc. ** Monitored beds are part of the total number of treatment beds. *** Although not a hospital, the Bowie Health Center operates as a freestanding emergency department under the acute care license of Prince George's Hospital Center. It is not open 24 hours per day, but unlike urgent care centers in Maryland, the Bowie Health Center accepts ambulances. ****Formerly North Arundel Hospital.
